

Reaktor, Nguyen Gobber

Reaktor is an expressive serif typeface built from a limited set of geometric shapes. Its rigorous construction principle at times produces unconventional letterforms, as in the capital R and the lowercase a. It also makes Reaktor a rare serif in the genre of geometric typefaces, where sans serifs are much more common. The first sketches of Reaktor were drawn in 2021, and over the course of five years the typeface was refined and expanded into a type family of four weights. From Regular to Bold, the typeface transitions from strong to moderate contrast while maintaining its visual presence. With its distinctive forms, Reaktor lends itself to wordmarks, titles, and posters.
